

FAMILIA MAYOL FINCA PIRCAS

Single Vineyard.

High Altitude Malbec (planted at an altitude of 1.060 meters / 3,478 feet) from Uco Valley.

This wine has been made through meticulous vineyard selection and canopy management. Vines naturally yield 18 hectoliters per hectare, 1.3 tons per acre (2,400 bottles).

Fermentation initiated with indigenous yeasts, a small percentage of passito malbec was added to the fermenting must. Transferred by natural gravity into French oak barrels where malolactic fermentation was spontaneously produced. The wine rested in barrels for 12 months (50% new oak).
